

Dear Rick,

I wanted to drop you a note about your new "Super Roll" Process. It's great and does exactly what you said it would do. Our shafts are now lasting longer and a matter of fact I have not changed one in a year and used to go thru 6-12 a year.

I have tracked the wear (regrind life before regrinding) and at this moment I am finding that we get 2-3 times the footage that we have got with non "Super Roll" tooling. I really think you are on to something here and You can rest assured I will buy nothing unless it's a "Super Roll".

Thank you and it's about time someone came up with something to extend the life of our tube mill tooling and protect our shafts from wearing out. Thanks again and hope to see you soon, hi to your dad and Bob Manos.—

Randy Sprow  
Tube mill Mgr.
